It will be observed that dry brushing increased the amount of decay to about two and one-half times the decay in the unbrushed in record No. 1, and to about two and one-fifth times in record No. 2. Washing increased the amount of decay to about six and two-tliirda times in record No. 1, and to about five and one-fifth times in record No. 2. The injury from cleaning the fruit is due to the increased opportunities for infection with spores of the blue mold and to mechanical injuries in the process of cleaning. The chances of decay are still further increased whenever the fruit is not thoroughly dried before packing. Washing in constantly running water or by running the fruits through brushes with water constantly sprayed over them is considered much less objectionable than the ordinary systems. Flavor.--The attack of the...
